

**Plant Enhancement Activity – PLT17 – Creating forest openings to improve hardwood stands**

**Enhancement Description**

Creating forest openings or patches is a silvicultural practice used to naturally regenerate over-mature and/or degraded hardwood stands while providing added cover and browse for several game and non-game species of wildlife.

**Land Use Applicability**

Forestland

**Benefits**

Years of harvesting high quality hardwood trees have left many forested acres with degraded, low quality trees. Creating a forest opening promotes the regeneration of a new, younger stand of desirable tree species by removing all standing trees in selected

areas (patches) within the forest. Patch areas are chosen based on their lack of acceptable growing stock (AGS), presence of desirable trees to regenerate the stand and presence of advanced regeneration. Wildlife habitat is increased by the amount of edge, cover and diversity of the tract created during the clearing.

**Conditions Where Enhancement Applies**

This enhancement applies to forest land use acres with conifers, hardwoods or mixed stands that have a forest management plan that recommends thinning within the next 3 years.

**Criteria**

1. Forested acres planned for this enhancement must be cleared during the contract period.
2. Forested acres that meet the “Conditions Where Enhancement Applies” must have an “acceptable growing stock” level below 50 sq. ft. of basal area per acre.
3. Site condition must be of medium or higher quality.
4. Forested acres targeted for patch development must contain species for regeneration from the NRCS state list. Species on this list were selected based on their abilities to regenerate from seed, sprouts or other natural regeneration sources.
5. For oaks, advance regeneration must be present or developed prior to the timber removal in order to be competitive with other faster growing species.
6. Size of patches to be treated can vary from 1 to 10 acres, be distributed throughout the forest and cannot total more than 50% of the acres meeting Criteria 2.
7. Trees removed during patch development having marketable quality can be sold.
8. Slash and cull trees must be managed to allow for natural regeneration to occur. This can be accomplished by:

United States Department of Agriculture  
Natural Resources Conservation Service

- a. Windrowing
  - b. Wildlife piles
  - c. Chipping
  - d. Cutting for firewood
9. Burning of slash is prohibited.

This enhancement is not for normal thinning or other forest stand improvement activities conducted on non-degraded sites.

### **Adoption Requirements**

This enhancement is considered adopted when forest openings have been created that meet the nine above criteria.

### **Documentation Requirements**

1. Site suitability and acceptable growing stock evaluation for each patch,
2. Identify the desired species to be regenerated and evidence they are present,
3. Map show where patches are located, and
4. Documentation that patch cut activities were completed, e.g. photo's, sale receipt.

PLANT ENHANCEMENT ACTIVITY

**PLT 17– OR      CREATING FOREST OPENINGS TO IMPROVE HARDWOOD STANDS**

**Description**

Creating forest openings or patches is a silvicultural practice used to naturally regenerate over-mature and/or degraded hardwood stands while providing added cover and browse for several game and non-game species of wildlife.

**Oregon Criteria**

Use this enhancement for the removal of the overstory conifer and the restoration of Oregon White Oak (*Quercus garryana*) woodland or savanna.

Criteria 2: Offered acres must have “acceptable growing stock” level below 50 sq. ft. per acre. This would be the equivalent of 64 12” DBH (diameter at breast height) oak trees.

Criteria 4: Target species for patch development: Oregon White Oak (*Quercus garryana*)

Criteria 8: Slash must be removed from site and management and control of invasive species must be part of the O&M (operation and maintenance) plan

**Documenting the Enhancement**

**Follow enhancement documentation requirements.**

**Conservation Stewardship Program Enhancements  
Requiring Cultural Resource Notification**

The enhancements identified below require that a cultural resources request form (OR-EVT-1 CR/TE (6/11) be completed and submitted prior to implementing the enhancement. If producer enhancements are not listed below and only a T&E species list is required, do not check the cultural resources box at the top of the form. If you need a cultural resources review make sure you include the contract number, USGS Quad name, tract number and legal location. Describe the planned action and include equipment to be used and the extent of the disturbance. Do not just list the enhancement code. The enhancements requiring cultural resource review are:
