

Find and Zoom to a PLS Section

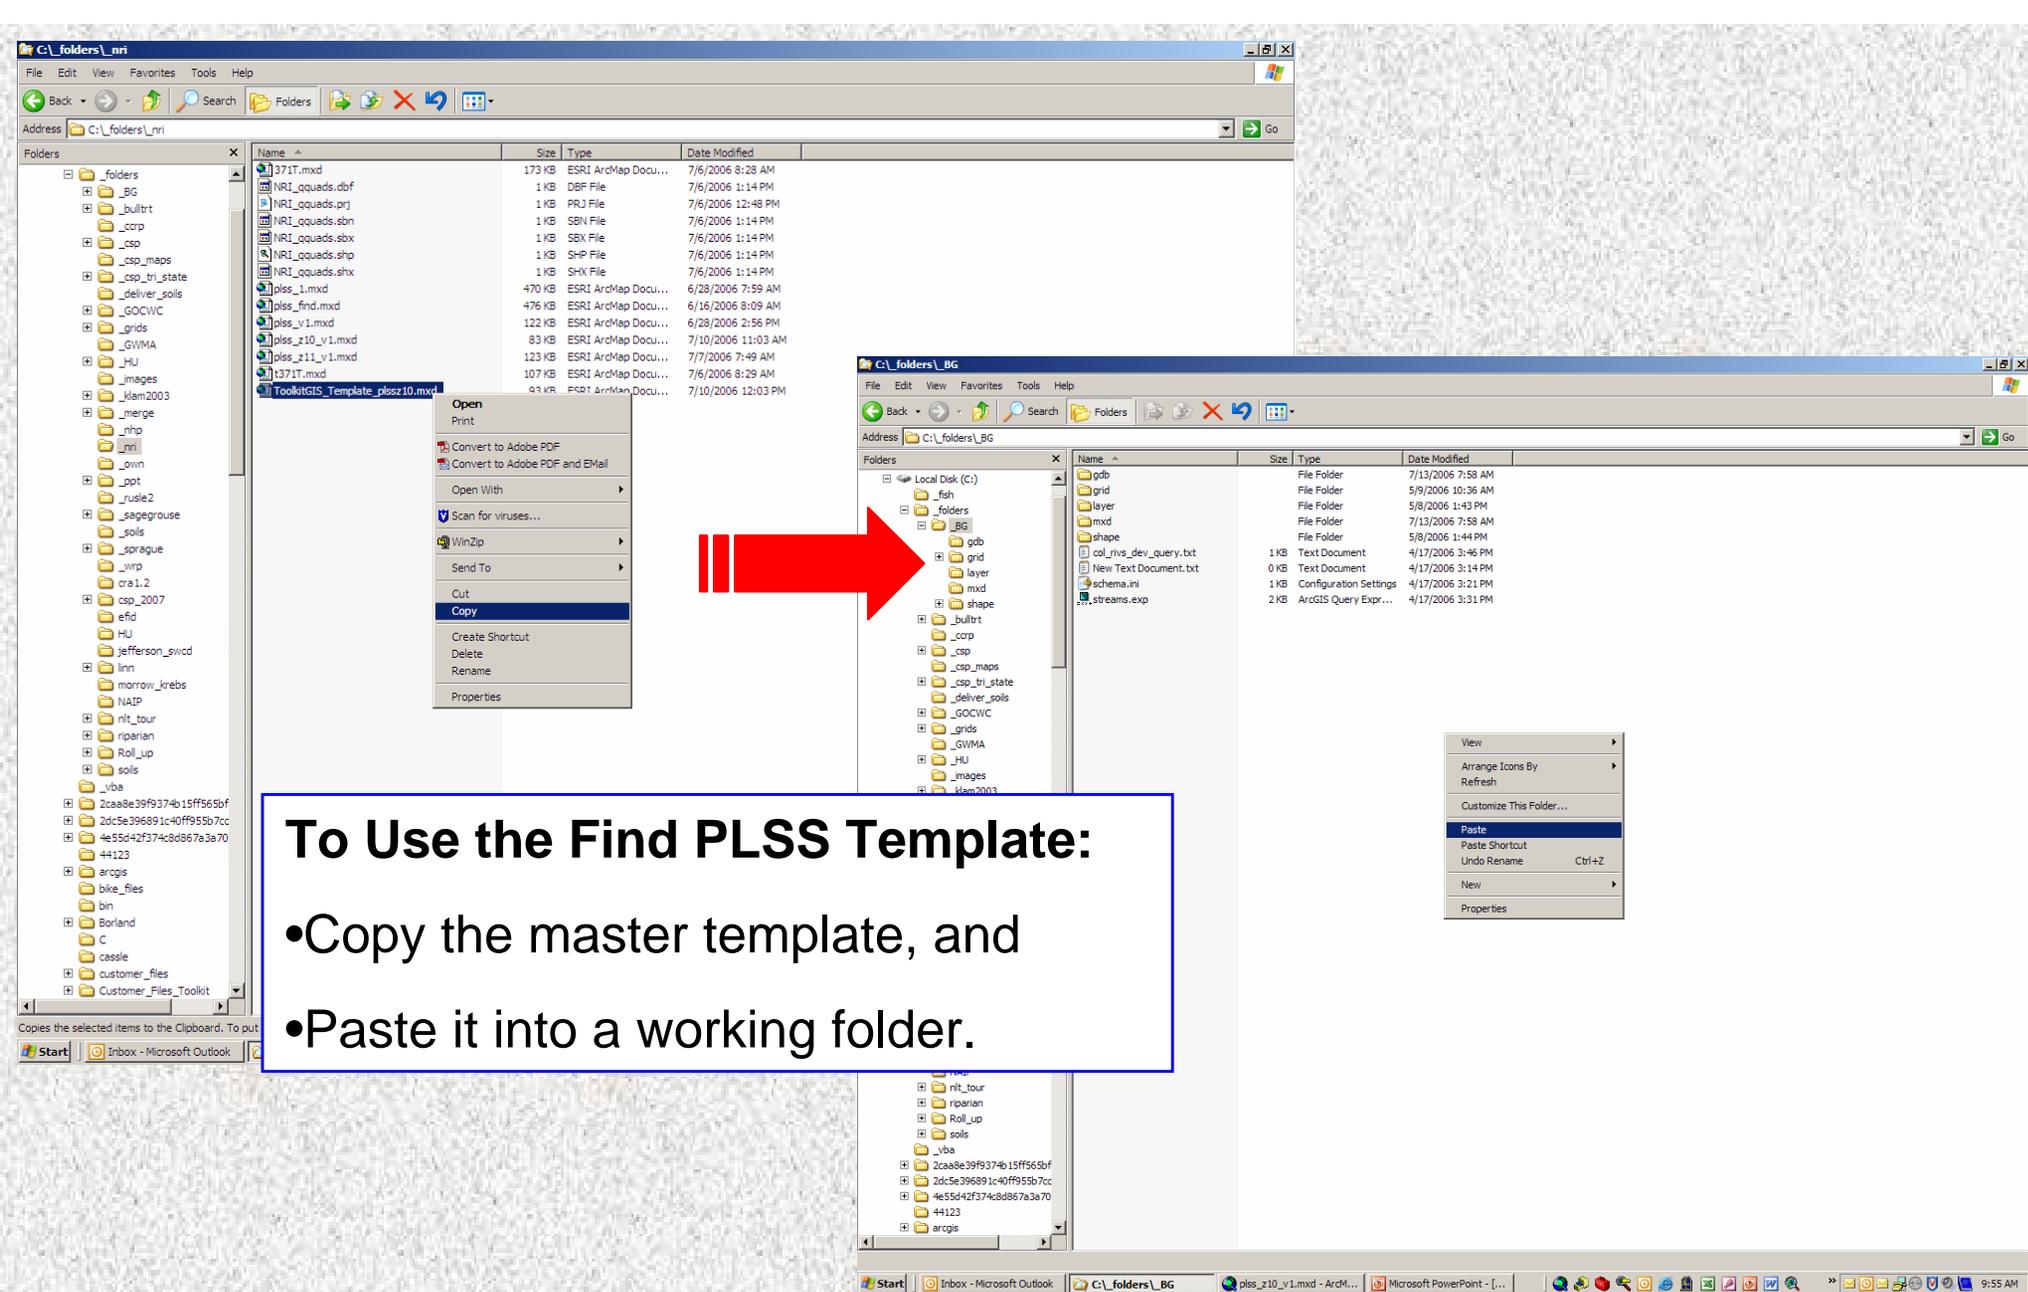

Using the “Find PLSS” Toolbar

Non-Toolkit Version

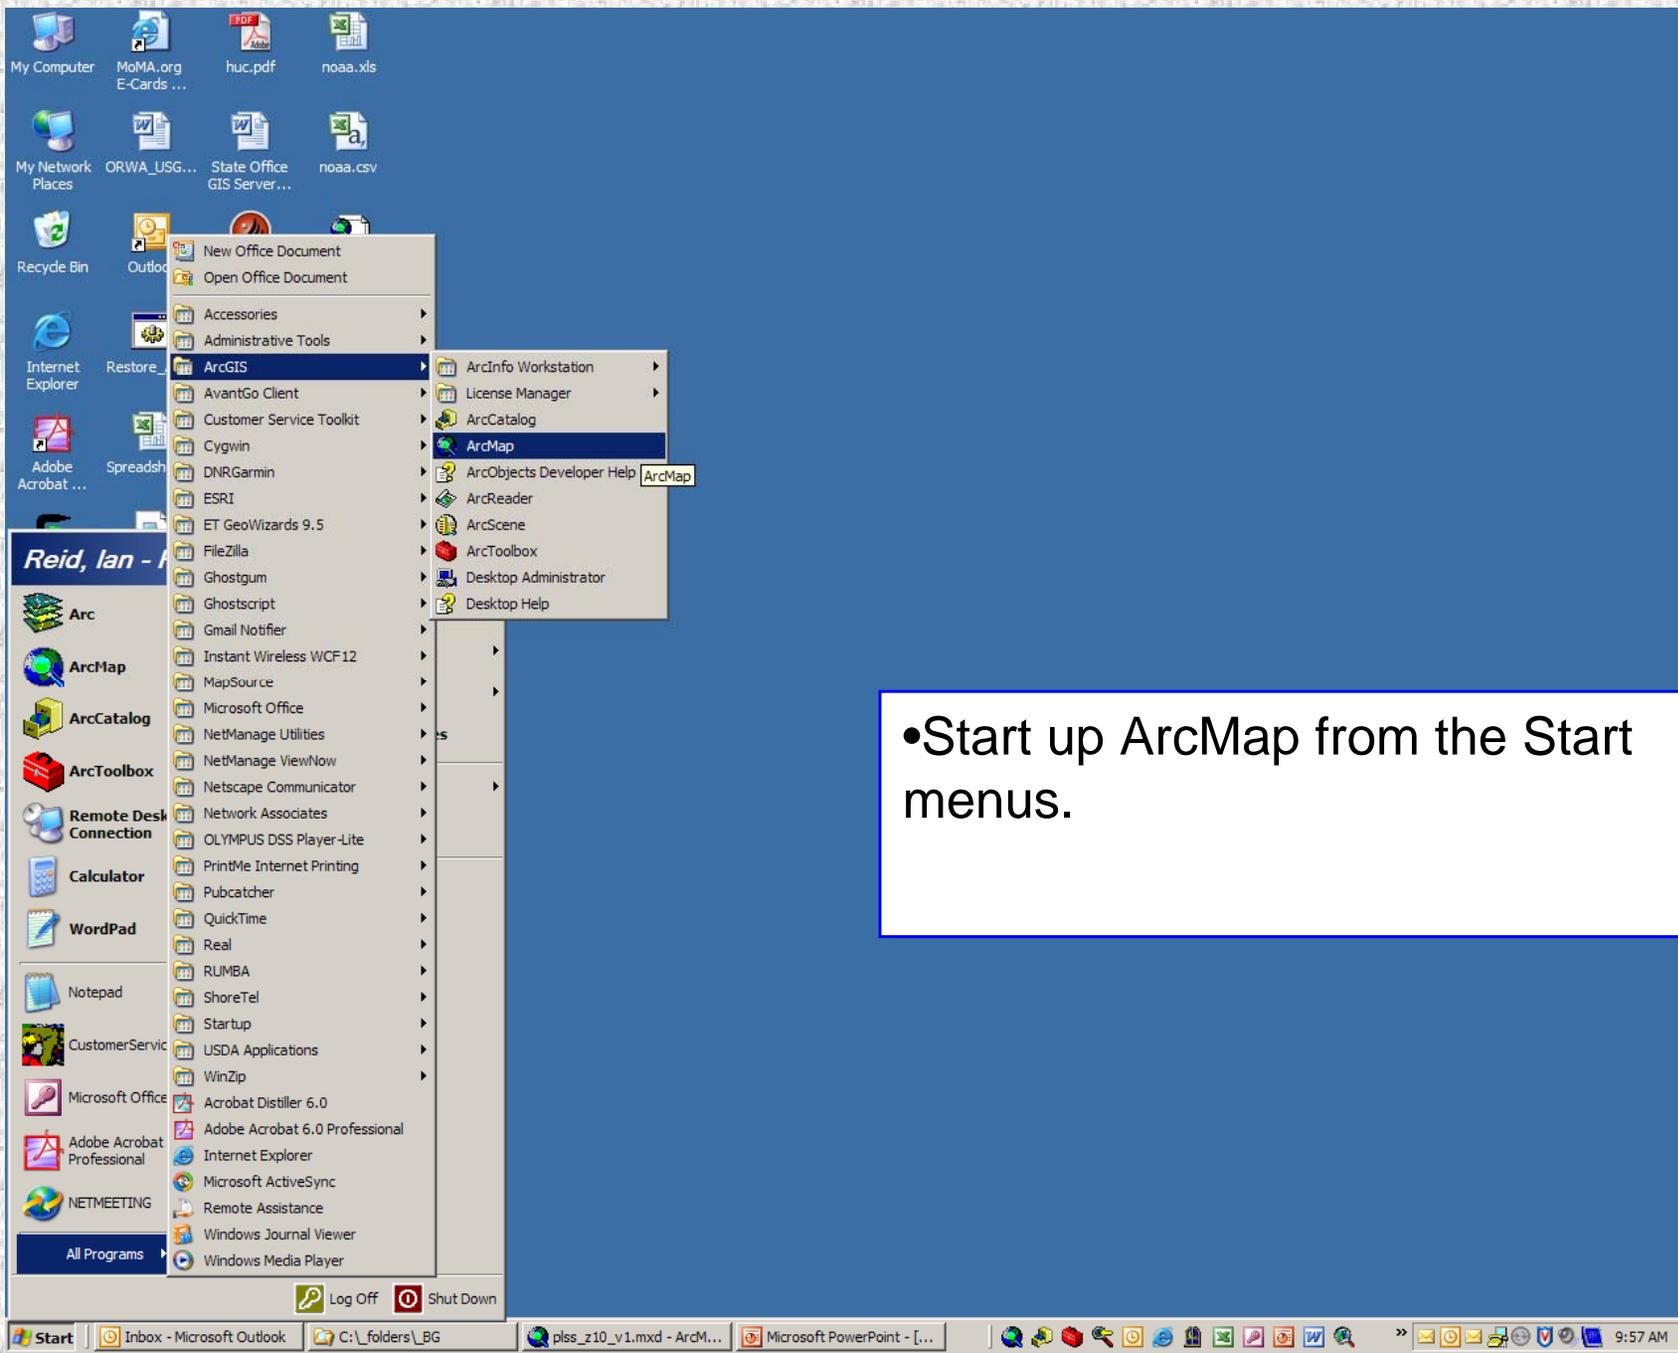

- Save the file plss_z10_v1.mxd to a permanent safe location of your choice.
- This will be the master copy of the mxd file.
- (See last slide for UTM zone 11 instructions).

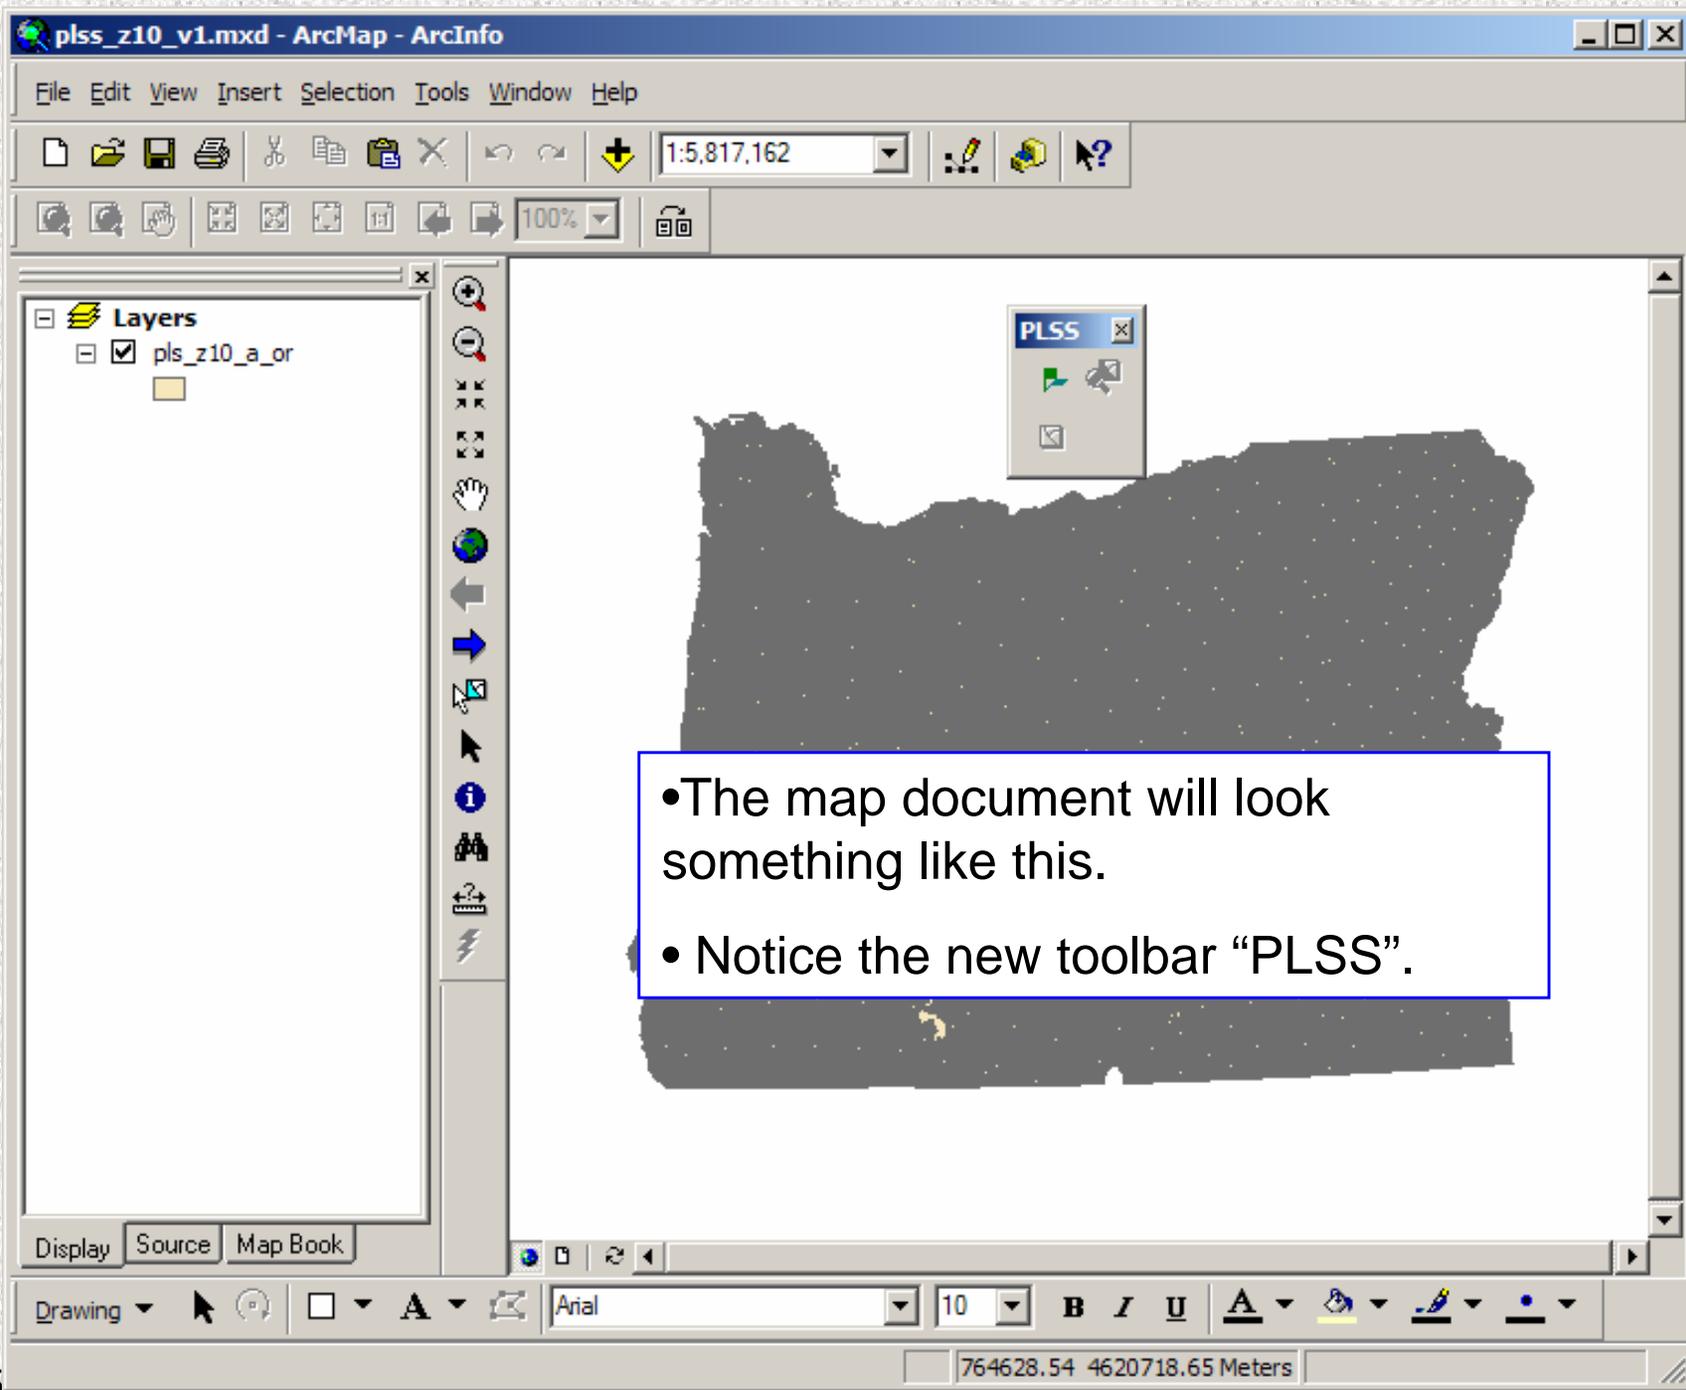

7/25/2006

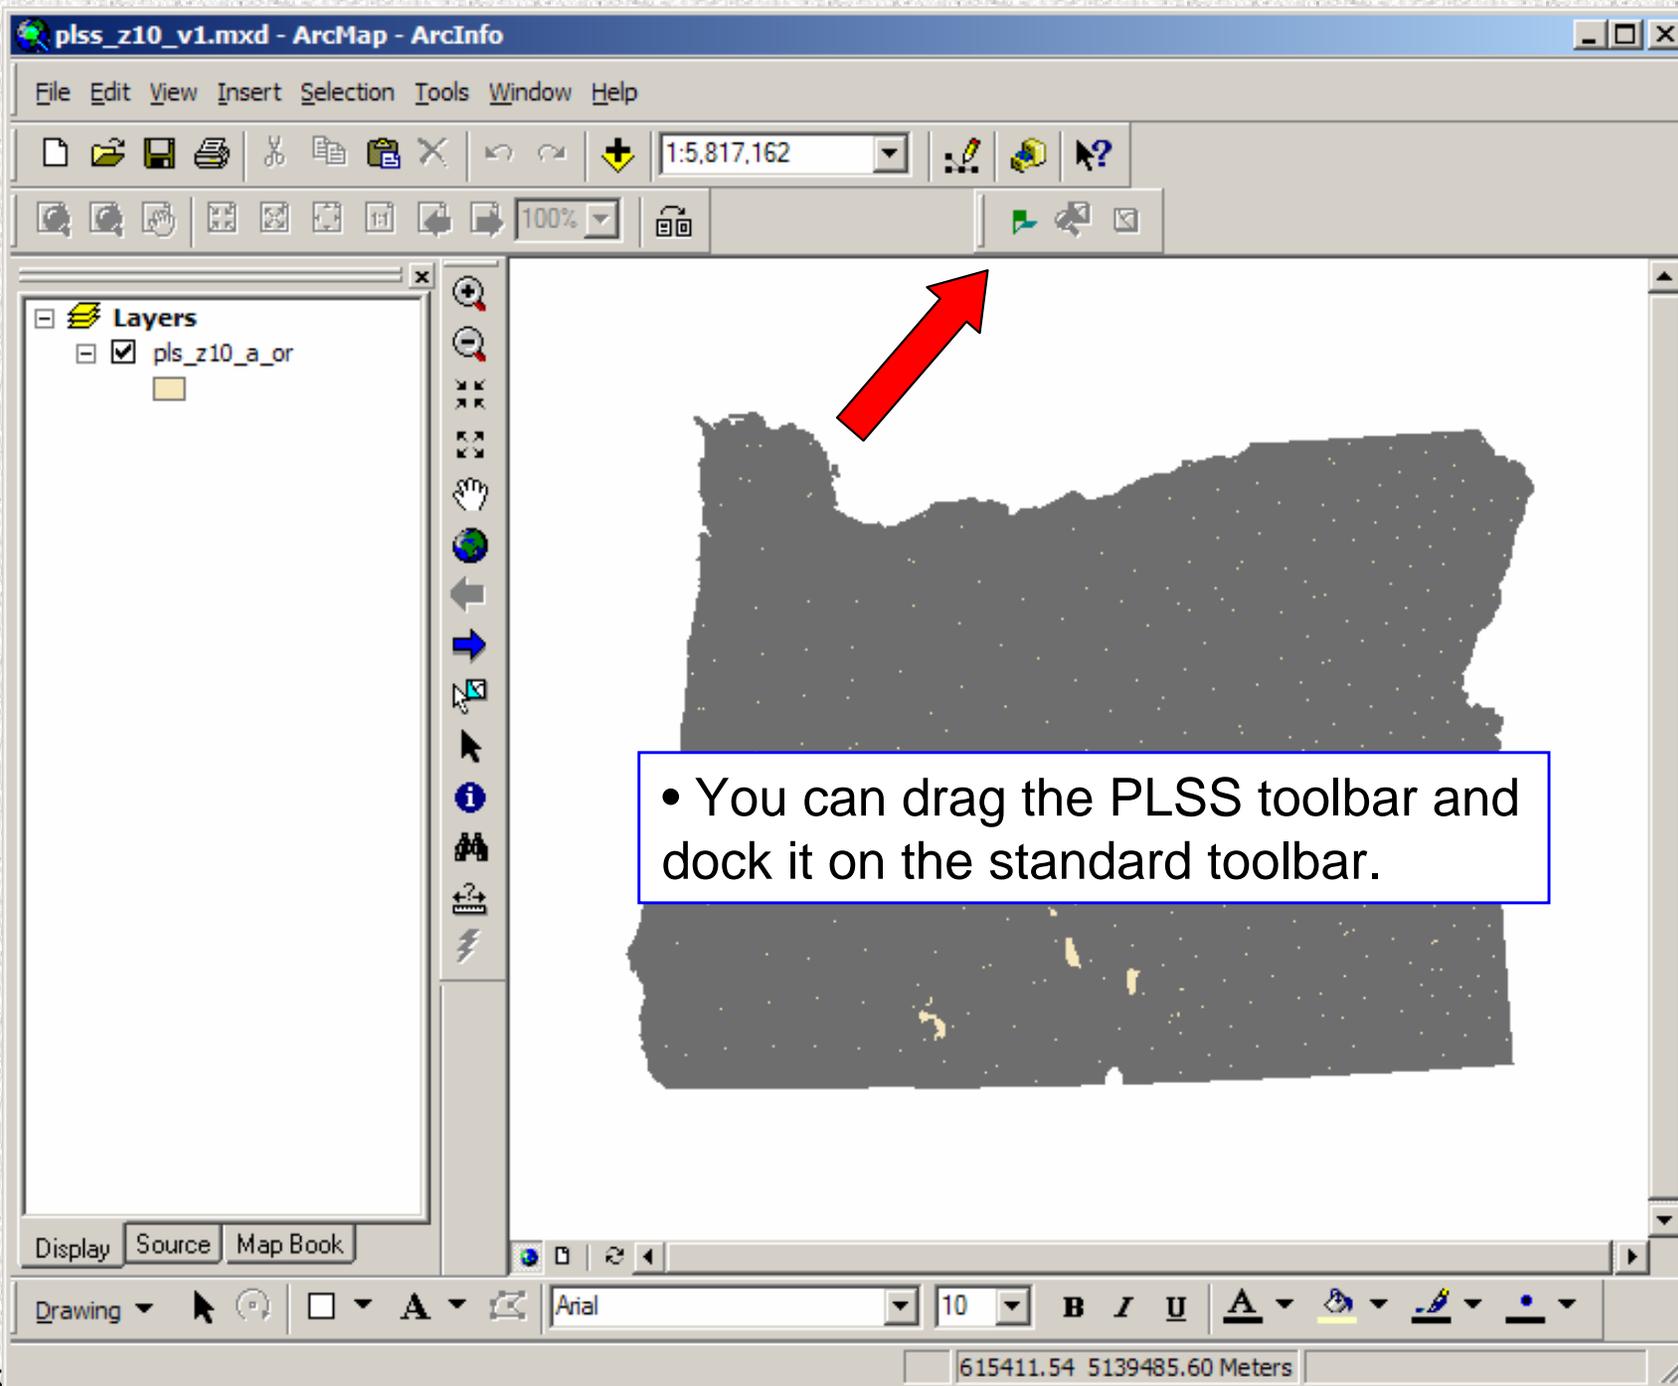

ver. 1.1

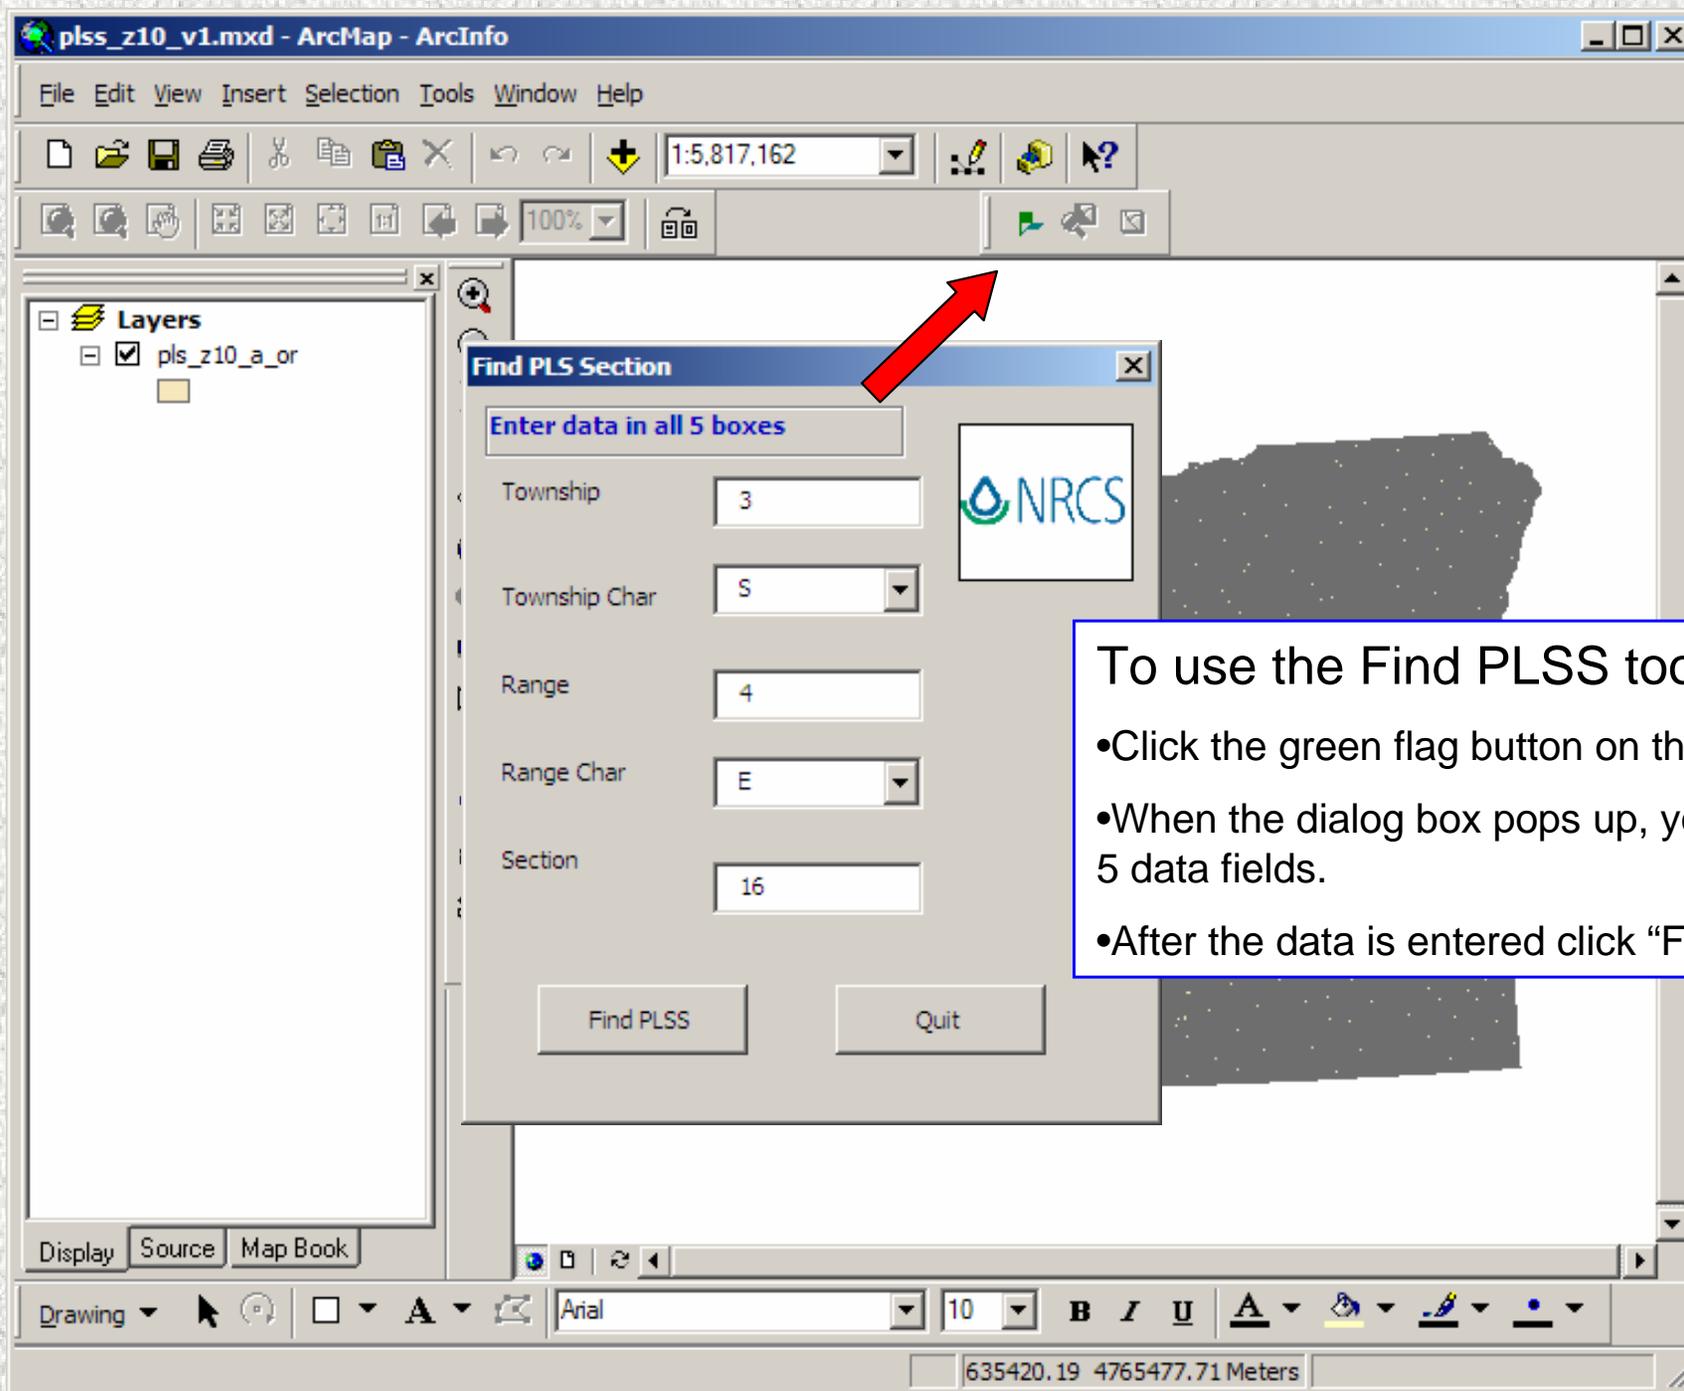

- Start up ArcMap from the Start menu.

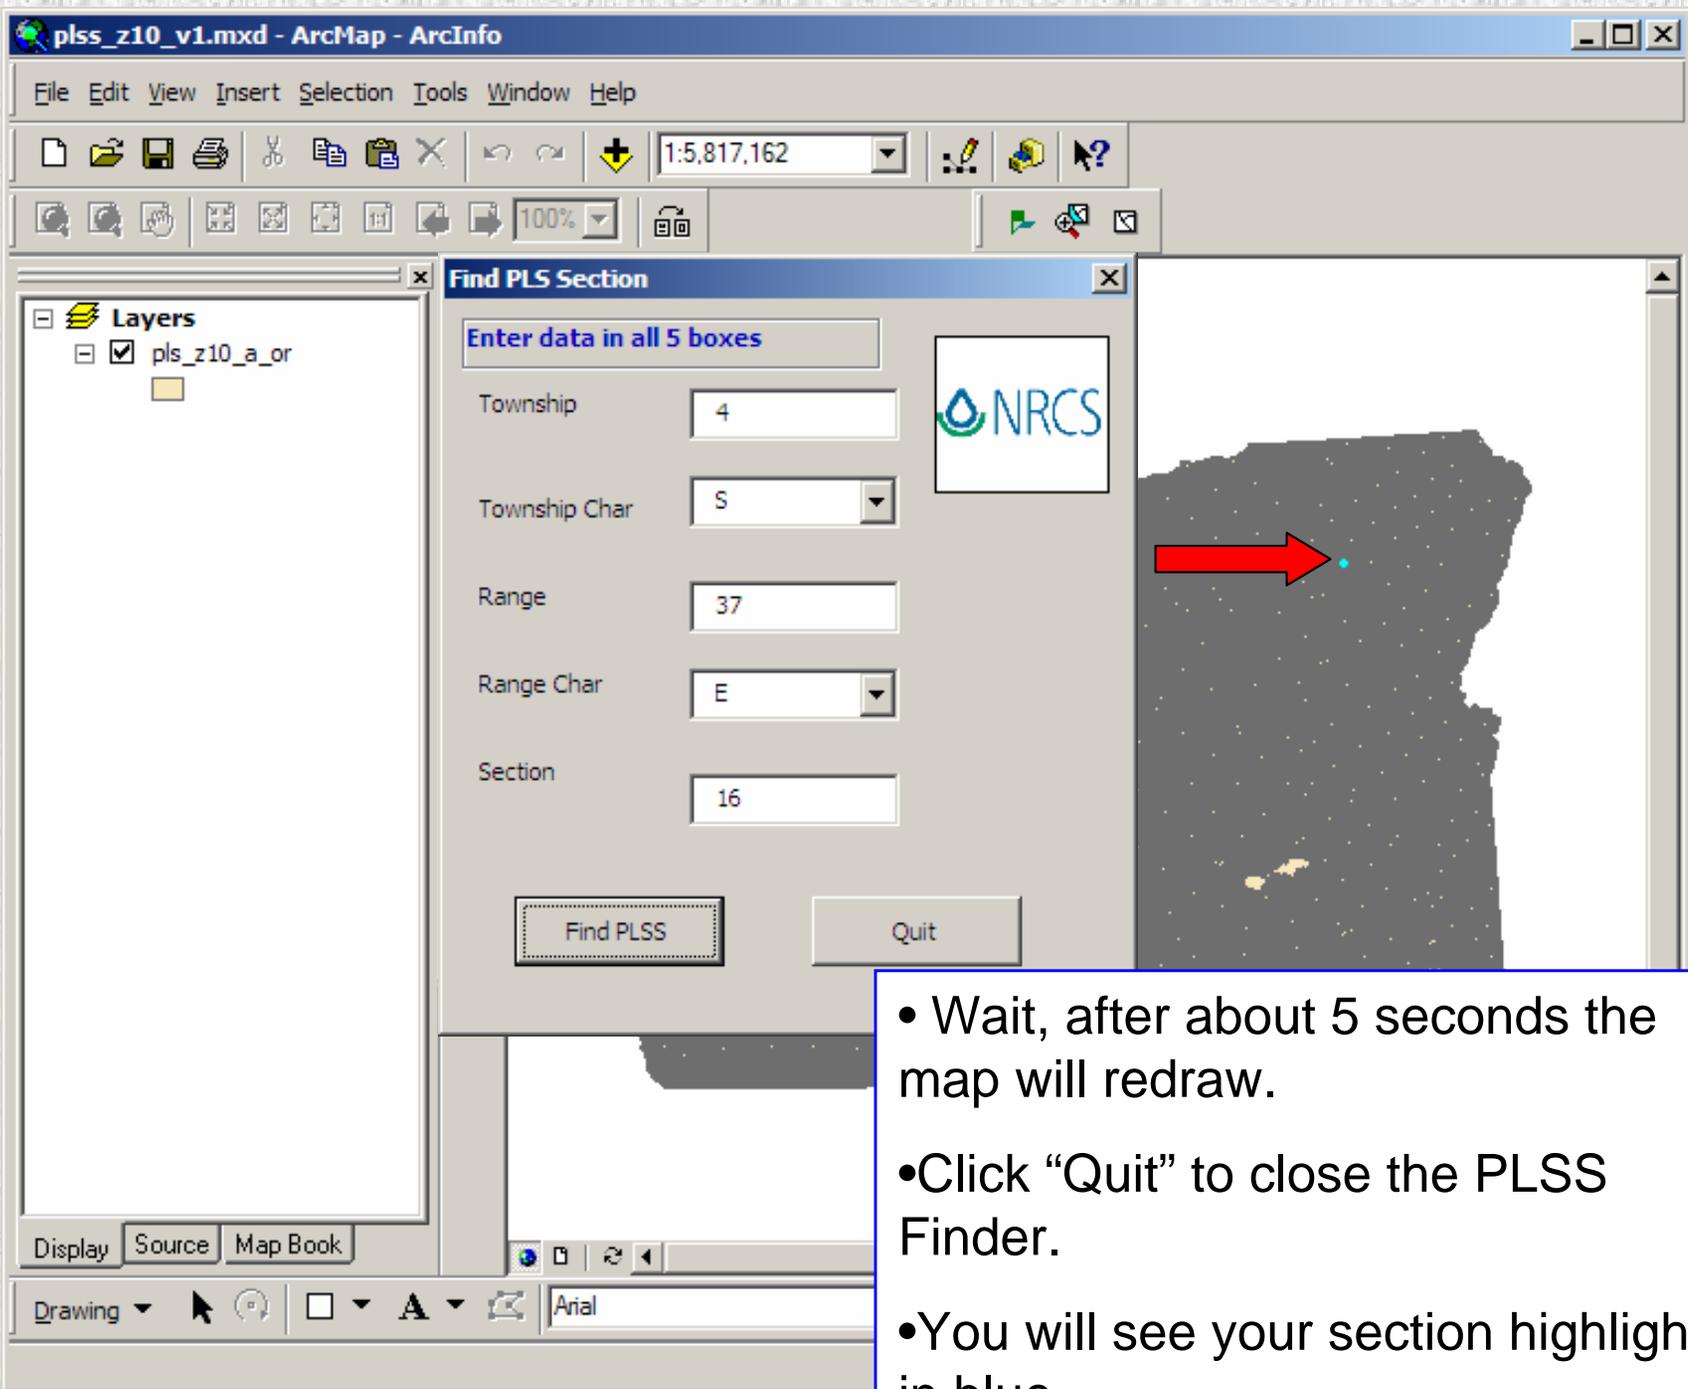

- The map document will look something like this.
- Notice the new toolbar “PLSS”.

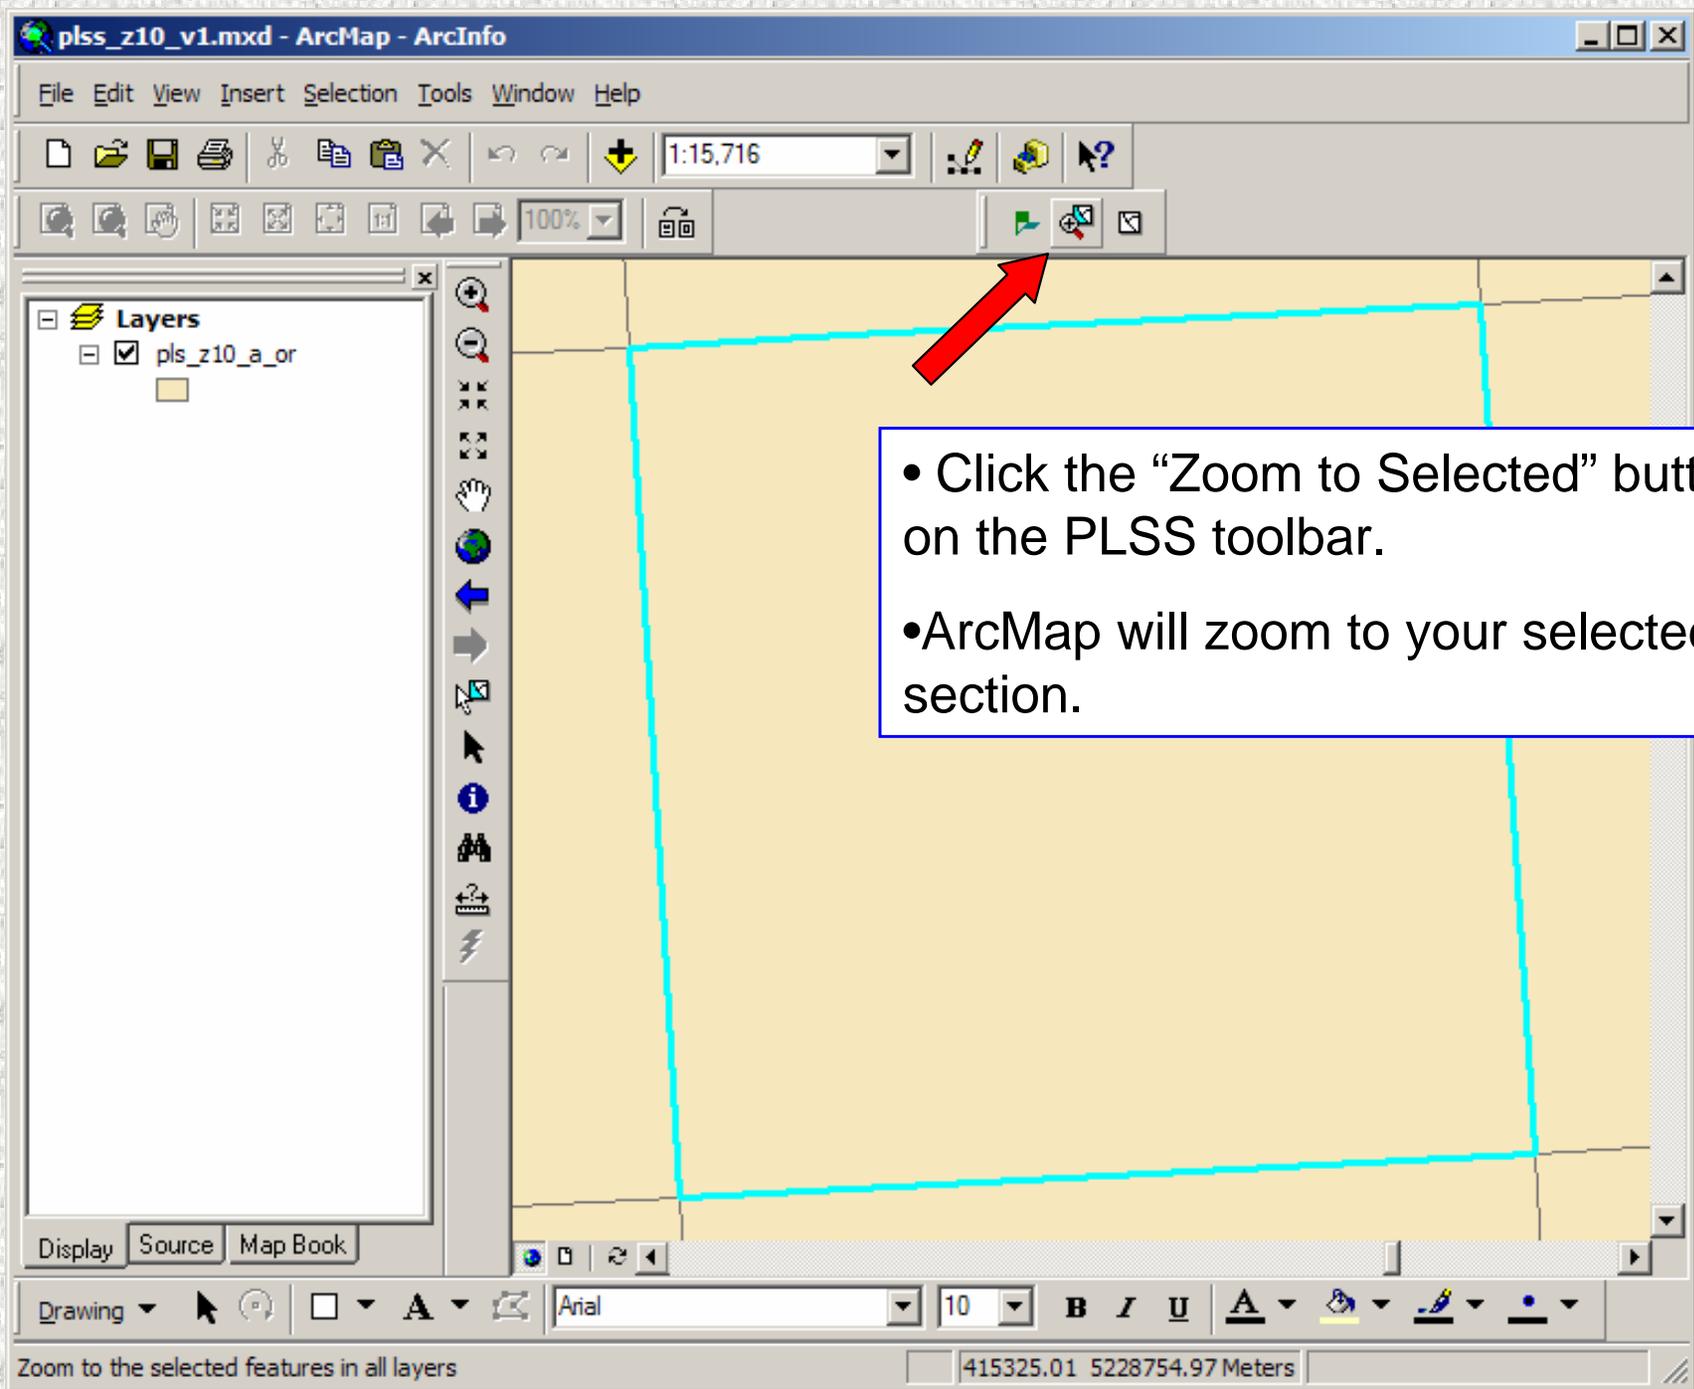

To use the Find PLSS tool:

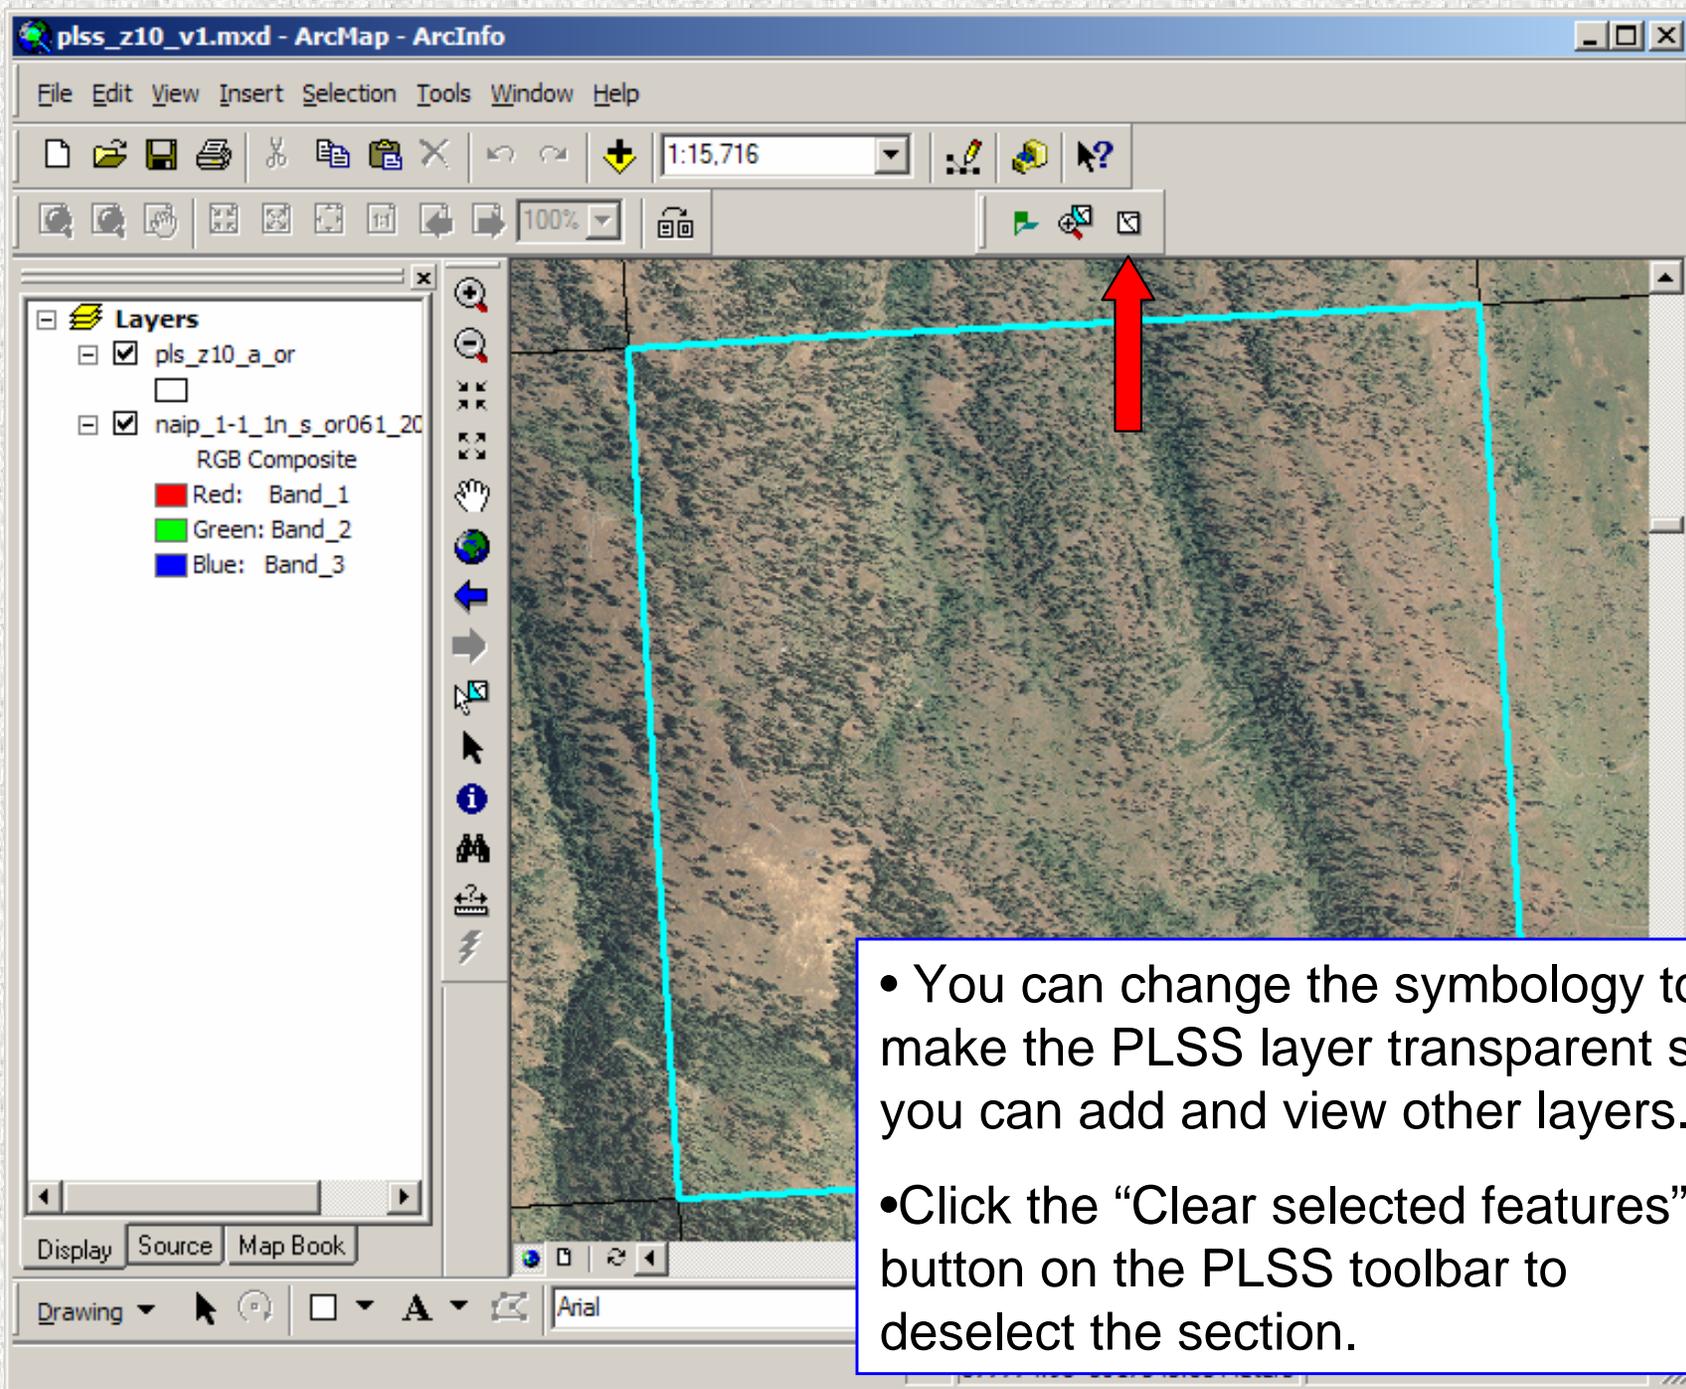

- Click the green flag button on the PLSS toolbar.
- When the dialog box pops up, you must fill in all 5 data fields.
- After the data is entered click "Find PLSS"

- Wait, after about 5 seconds the map will redraw.
- Click "Quit" to close the PLSS Finder.
- You will see your section highlighted in blue.

- Click the “Zoom to Selected” button on the PLSS toolbar.
- ArcMap will zoom to your selected section.

- You can change the symbology to make the PLSS layer transparent so you can add and view other layers.
- Click the "Clear selected features" button on the PLSS toolbar to deselect the section.

Saving the MXD Document

- You can save copies of plss_z10_v1.mxd to any folder.
- You can rename the mxd – keeping “PLSS” in the title may help you open the correct mxd later.
- Currently you cannot add the “Find PLSS” toolbar to other mxd files, i.e. you need to open copies of the mxd that contains the toolbar.
- For UTM zone 11, use plss_z11_v1.mxd, instead of plss_z10_v1.mxd.
