\*\* We have chosen to provide the complete Oregon NRI results for all natural resource land cover/use categories, including rangeland, in order to provide a complete "snapshot" of the state. It is important for the data user to recognize that the rangeland conversion estimate has a high standard error (100%) and should be used with caution. This type of result may be useful for grouping estimates into broad categories (such as high, medium, and low), but the numerical estimate itself has low reliability.
