Total Converted	74,900	**	67,100	**	29,300	**	122,100	**	293,400	**

* See Details Page

** The estimates for prime farmland soils converted to urban lands between 1982 and 1997 were derived by adding the estimates for the 1982 to 1992 period to the estimates for the 1992 to 1997 period. There are no standard error estimates for 1982 to 1997.

*** We have chosen to provide the complete Oregon NRI results for all natural resource land cover/use categories, including rangeland, in order to provide a complete "snapshot" of the state. It is important for the data user to recognize that the rangeland conversion estimate has a high standard error (100%) for the 1992 to 1997 time period, and should be used with caution. This type of result may be useful for grouping estimates into broad categories (such as high, medium, and low), but the numerical estimate itself has low reliability.
