NOTE: Data may not add to totals because of rounding. The error referred to in the table is the standard error of the estimate. You can obtain the margin of error at the 95% confidence limit by multiplying the error by 1.96

** We have chosen to provide the complete Oregon NRI results for all natural resource land cover/use categories, including rangeland, in order to provide a complete "snapshot" of the state. It is important for the data user to recognize that the rangeland conversion estimate has a high standard error (100%) and should be used with caution. This type of result may be useful for grouping estimates into broad categories (such as high, medium, and low), but the numerical estimate itself has low reliability.

Standard errors greater than 50% of the estimate indicate a low level of statistical reliability.
